HOW TO GROW SEEDS IN EGG CUPS!

WHAT YOU'LL NEED:

- Empty egg cartons
- Seeds
- Potting Soil
- Scissors
- Plastic bag

METHOD:

1. Prepare your egg cartons. Poke a few small holes at the bottom of each cup. This way the water will drain through effectively.
2. Fill your egg cups halfway with potting soil and then add 2 or 3 seeds per cup. Make sure to check the instructions on your seed packet as that will tell you how deep the seeds should be planted.
3. Water your egg cups well – the soil needs to be moist but not soaking.
4. Keep your egg cups warm! For seeds to germinate, they need to be at 70 degrees so think about wrapping them in a plastic bag or putting them in a warm area in your home.
5. Once they start to sprout, remove them from the bag and put them in a sunny spot until they are ready to be planted outside.
6. 6) When the roots reach the bottom of the egg cups, it's time to plant them outside. Simply cut the cups apart and plant them in the soil. Cardboard will disintegrate into the ground!
7. 7) Cover with soil, water regularly and watch your seeds come to life!
